

SOAK UP THE SUN

and save money on your bills

FAIREENERGY

A seamless transition to renewable heating

Renewable Heat Incentive

MCS accredited solar installations will make you eligible for the Renewable Heat Incentive, where the government pays you money for every unit of renewable heat energy you use.* This could be hundreds of pounds each year, so you can sit back and relax while the sun saves you money.

- ✦ Solar thermal is an efficient way to get hot water in the UK climate, even when it's cloudy
- ✦ Get the Renewable Heat Incentive and cover the whole cost of the installation
- ✦ Save money on your fuel bills
- ✦ Solar energy lowers your carbon footprint and is good for the environment

* See www.fairenergy.org.uk for more information about the Renewable Heat Incentive

Solar thermal systems

Fair Energy installs solar thermal systems designed for the UK climate, giving you:

- ✦ Around 70% of your hot water every year, even in cold and windy weather
- ✦ Rapid transfer of the sun's energy into available hot water
- ✦ Maintenance free systems with exceptional build quality

Flat panel or vacuum tube systems

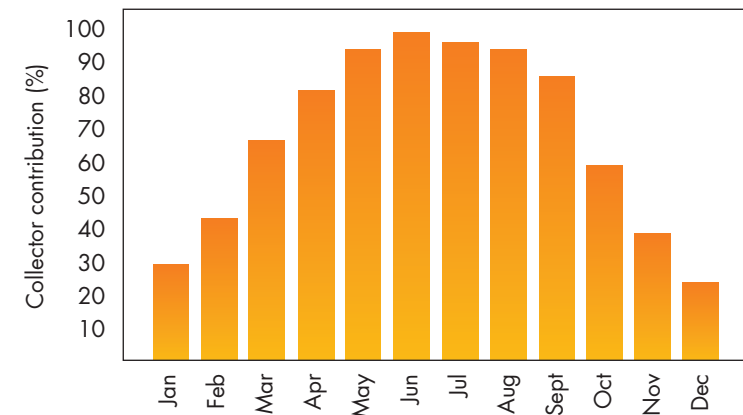

There are advantages to both systems depending on your requirements. Both flat panel and vacuum tube systems require no maintenance and only need a quick service every three years to ensure optimum efficiency.

Flat panels are efficient, aesthetically pleasing and can be installed in the roof or on top of the roof.

Evacuated vacuum tubes are very efficient in the UK climate but they can only be installed over roof tiles.

Typical solar hot water generation over a year (average of 70%)

There has never been a better time to make the switch to renewable energy

Tangible solutions to lowering fuel costs and CO₂ levels

Fair Energy CIC

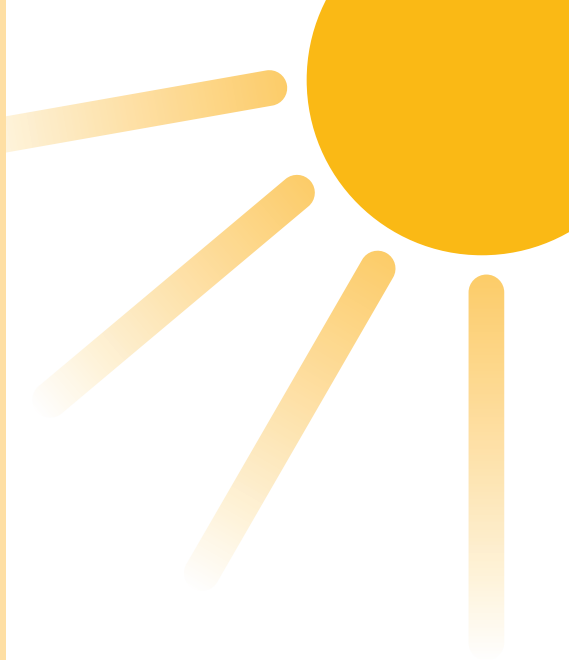

Fair Energy is a Community Interest Company specialising in seamless, full service transition to renewable heating for domestic and commercial customers. We design, install and integrate solar thermal hot water systems as well as wood fuel biomass boilers.

As a Community Interest Company we have social enterprise goals. We help individuals and communities take control of renewable heating to give them energy independence, lower fuel costs and lower CO₂ emissions. Our ultimate aim is to help alleviate global fuel poverty and encourage secure and affordable energy to fuel our future.
